### Dahlia 'LeeAnn's FD61A'

---

#### Abstract

A new and distinct cultivar of *Dahlia* plant named 'LeeAnn's FD61A' is disclosed, characterized by a strong, upright growth habit, combined with free and early flowering. Flowers are held above the foliage canopy and have a consistent quality throughout the growing season. Flowering stems have an above average strength with a firm blossom attachment. Flower color is a deep magenta. Inflorescences have strong postproduction quality. The new variety is a *Dahlia* typically produced for cut flower purposes, or garden or landscape.

#### Background/Summary

[0001] Latin name of the genus and species: *Dahlia hybrida*.

[0002] Variety denomination: 'LeeAnn's FD61A'.

#### BACKGROUND OF THE INVENTION

[0003] The new *Dahlia* cultivar is a product of a planned breeding program conducted by the inventor, in Greencastle, Pennsylvania. The objective of the breeding program was to produce new *Dahlia* varieties with improved performance in open field conditions and produce cut flowers suitable for transport and sale. The open-pollination resulting in this new variety was made during 2018.

[0004] The seed parent is the unpatented, variety of *Dahlia* 'Fluffles'. The pollen parent is unidentified. Seed from 'Fluffles' was collected in 2018 and grown in a cultivated garden area in 2019. 'LeeAnn's FD61A' was intentionally selected from the seedlings that resulted based on the criteria of stem length and strength, upright growth habit, blossom attachment, petal count, and bloom color.

[0005] Asexual reproduction of the new cultivar was first performed by tubers by the inventor in Greencastle, Pennsylvania in the Spring of 2020 and has shown that the unique features of this cultivar are stable and reproduced true to type in successive generations.

#### SUMMARY OF THE INVENTION

[0006] The cultivar 'LeeAnn's FD61A' has not been observed under all possible environmental conditions. The phenotype may vary somewhat with variations in environment such as temperature, day length, and light intensity, without, however, any variance in genotype.

[0007] The following traits have been repeatedly observed and are determined to be the unique characteristics of 'LeeAnn's FD61A' These characteristics in combination distinguish 'LeeAnn's FD61A' as a new and distinct *Dahlia* cultivar: [0008] 1. Strong, upright growth habit. [0009] 2. Free branching. [0010] 3. Self-supporting plant habit. [0011] 4. Consistency of bloom quality throughout the growing season. [0012] 5. Early flowering. [0013] 6. Above average stem strength. [0014] 7. Firm blossom attachment. [0015] 8. Deep magenta flower color.

[0016] Plants of the new cultivar 'LeeAnn's FD61A' are similar to plants of the seed parent, in some horticultural characteristics, however, plants of the new cultivar 'LeeAnn's FD61A' differ in the following; [0017] 1. The new variety has a larger, deep magenta flower; 'Fluffles' has a lavender/pink flower with a cream center.

[0018] The pollen parent cannot be identified with certainty.

#### COMMERCIAL COMPARISONS

[0019] Plants of the new cultivar 'LeeAnn's FD61A' are comparable to the variety *Dahlia* 'Karma Choc', U.S. Plant Pat. No. 18,422. The two *Dahlia* varieties are similar in most horticultural characteristics; however, the new variety 'LeeAnn's FD61A' differs in the following: [0020] 1. Flowers of the new variety are a decorative form; flowers of this comparator are waterlily form. [0021] 2. Flower color of the new variety is deep magenta; flower color of 'Karma Choc' is red. [0022] 3. Plants of the new variety have more leaf coverage than plants of 'Karma Choc'. [0023] 4. Foliage of the new variety is lighter in color than foliage of 'Karma Choc'.

---

## Description

#### BRIEF DESCRIPTION OF THE PHOTOGRAPHS

[0024] The accompanying photograph in FIG. 1 illustrates in full color a typical flowering plant of 'LeeAnn's FD61A' grown outdoors, in the ground under cut flower production conditions.

[0025] Age of the plant photographed is approximately 18 weeks from a tuber.

[0026] FIG. 2 illustrates a close-up of a typical flower.

[0027] FIG. 3 is a plant of the new variety grown in a 3-gallon pot at about 9 months old. The photographs were taken using conventional techniques and although colors may appear different

from actual colors due to light reflectance it is as accurate as possible by conventional photographic techniques.

## DETAILED BOTANICAL DESCRIPTION

[0028] In the following description, color references are made to the Royal Horticultural Society R.H.S. Colour Chart 2015 except where general terms of ordinary dictionary significance are used.

[0029] The following observations and measurements describe 'LeeAnn's FD61A' plants grown outdoors in Greencastle, PA. The growing temperature ranged from about 5° C. to 30° C. during the day and from 3° C. to 10° C. during the night. General light conditions are bright, normal sunlight. Measurements and numerical values represent averages of typical plant types. [0030]

Botanical classification: *Dahlia hybrida* 'LeeAnn's FD61A'.

## PROPAGATION

[0031] Type of propagation typically used: Vegetative terminal cuttings or tubers.

## PLANT

[0032] Plant Type: Herbaceous flowering perennial. [0033] Growth Habit: Strong, rounded growth habit that branches freely producing numerous strong stalks holding inflorescences at the leaf canopy. Vigorous growth and regrowth after continuous inflorescence harvesting. Plants are self-supporting and bloom earlier than the average *Dahlia* grown in the Inventor's test field. [0034] Height: 108 cm. [0035] Plant Spread: 66 cm. [0036] Growth Rate: Vigorous. [0037] Branching Characteristics: Free-branching, lateral branches on average 40 cm long.

## FOLIAGE

[0038] Leaf: [0039] *Shape*.—Ovate. [0040] *Apex*.—Acute. [0041] *Base*.—Oblique. [0042] *Arrangement*.—Opposite. Single or composite with 3 to 7 leaflets. [0043] *Length*.—Single leaves: About 94 mm. Compound leaves with three leaflets: About 120 mm. Compound leaves with five leaflets: About 144 mm. Compound leaves with seven leaflets: About 167 mm. [0044] *Width*.—Single leaves: about 48 mm. Compound leaves with three leaflets: about 108 mm. Compound leaves with five leaflets: about 132 mm. Compound leaves with seven leaflets: About 144 mm. [0045] *Attachment*.—Petiolate. [0046] *Margin*.—Serrate. [0047] *Texture of top surface*.—Glabrous. [0048] *Texture of bottom surface*.—Glabrous. [0049] *Color*.—Young foliage upper side: RHS Green 138A. Young foliage under side: RHS Green 138B. Mature foliage upper side: RHS Green 137C. Mature foliage under side: RHS Green 138B. [0050] *Venation*.—Type: Palmate. Venation color upper side: RHS Red 185A; midvein Green-Yellow 151C. Venation color under side: RHS Yellow-Green 150C. [0051] Petiole: [0052] *Single leaves*.—Length: 1.4 cm. Diameter: 30 mm. [0053] *Compound leaves*.—Length: 30 to 34 mm. Diameter: 30 to 35 mm. Color.—RHS Yellow-Green 144B. Texture.—Glabrous all surfaces.

## FLOWER

[0054] Time to flower: Plants begin to bloom around 72 days after planting, continuously blooming until season ending frost. [0055] Inflorescence and flower type and habit: Fully double decorative *Dahlia* flower. Upright or slightly outwardly angled blossom position. [0056] Post production longevity: Inflorescences maintain good substance on the plant for about 10 days and for about 5 days as a cut flower. [0057] Inflorescence size: [0058] *Diameter*.—7.9 cm. [0059] *Height*.—5 cm. [0060] *Receptacle diameter*.—3.5 mm. [0061] Bud: [0062] *Shape*.—Oblate. [0063] *Length*.—7.4 mm. [0064] *Diameter*.—12 mm. [0065] *Color*.—RHS Yellow-Green N144A. [0066] *Texture*.—Glabrous. [0067] Ray Florets: [0068] *Number of ray florets per inflorescence*.—About 104 arranged in 13 whorls. [0069] *Length*.—About 37 mm. [0070] *Width*.—About 22.5 mm. [0071] *Shape*.—Obovate. [0072] *Apex*.—Obtuse. [0073] *Base*.—Aequilateral. [0074] *Aspect*.—Initially upright to slightly forward to the peduncle to cupped when completely reflexed. [0075] *Texture and appearance*.—Upper surface-Smooth, velvety with gold diamond dust reflective qualities. Lower surface-Smooth, velvety with gold diamond dust reflective qualities. [0076] *Color*.—Fully opened: Apex (upper 10% of floret) Red-Purple N74A, Floret Body Red-Purple N57A, Floret Base Greyed-Yellow 162B. [0077] Disc florets: [0078] *Number of disc florets per inflorescence*.—About 65.

[0079] *Shape*.—Tubular. [0080] *Apex*.—Acute. [0081] *Length*.—About 9 mm. [0082] *Diameter, base*.—About 1 mm. [0083] *Color*.—Apex yellow 9C, midsection N25C, base 2B. [0084] *Phyllaries*: [0085] *Quantity per inflorescence*.—Average 5 arranged in a single whorl. [0086] *Length*.—About 13 mm. [0087] *Width*.—About 5 mm. [0088] *Shape*.—Oval. [0089] *Apex*.—Acute. [0090] *Base*.—Aequilateral. [0091] *Margin*.—Entire. [0092] *Texture*.—Upper and lower surfaces smooth, glabrous, waxy. [0093] *Peduncle*: [0094] *Length*.—42 cm. [0095] *Diameter*.—9 mm. [0096] *Angle*.—Erect to about 14° from vertical. [0097] *Strength*.—Exceptional with no bend or give. [0098] *Texture*.—Glabrous, subtle sulcation. [0099] *Color*.—RHS Yellow-Green 146C.

#### REPRODUCTIVE ORGANS

[0100] *Disc florets*: [0101] *Stamens*: [0102] *Number*.—5. [0103] *Stamen Attachment*.—Filament adnate to ventral surface of corolla. [0104] *Stamen length*.—About 10 mm. [0105] *Anthers*: [0106] *Length*.—About 5 mm. [0107] *Width*.—Less than 1 mm. [0108] *Shape*.—Linear. [0109] *Pollen*: [0110] *Quantity*.—Moderate. [0111] *Color*.—Yellow-Orange 17A. [0112] *Pistil*: [0113] *Number*.—1. [0114] *Length*.—About 17 mm. [0115] *Stigma shape*.—Bifurcate. [0116] *Stigma length*.—About 3 mm [0117] *Stigma width*.—About 0.4 mm [0118] *Stigma color*.—Yellow-Orange 17B. [0119] *Ovary*.—Position: Inferior. Shape: Truncate. Length: 2 mm. Width: 1.3 mm. Color: RHS Green-White 157A.

#### OTHER CHARACTERISTICS

[0120] *Fruit/seed*: About 12 mm long, 2.5 mm wide, colored near Brown 200A [0121] *Disease/pest resistance*: Neither resistance nor susceptibility to has been observed. [0122] *Weather and climate performance*: Plants of the new *Dahlia* have excellent tolerance to heat and high UV index, resisting wilting and fading in field grown conditions. Daylight length has minimal effects on bud and bloom production, maintaining cut flower output into late season light and weather conditions.

## Claims

1. A new and distinct cultivar of *Dahlia* plant named ‘LeeAnn's FD61A’ as herein illustrated and described.

---
