Global Economic and Life Solution System and Its Implementation Method Based on the BEI_24HWS Human Sovereignty Ecosystem

Abstract

A human-centric global sovereignty ecosystem (BEIx24HWS) combining fractal domain naming, behavior-energy tokenization, hybrid governance, instant DeFi, AI optimization, and sustainable certification. Simulated annual token output exceeds 303 trillion USD, creating over 6 billion jobs and enabling an inclusive, sustainable economic model for 8.2 billion users.

Background/Summary

TECHNICAL FIELD

[0001] The present invention relates to blockchain-based token-economy systems integrating human behavioral data, domain-name identity, and resource management into a unified global platform with hybrid governance and AI-blockchain optimization.

BACKGROUND OF THE INVENTION

[0002] 1. Centralized Internet and financial platforms (e.g., Amazon, SWIFT) limit user sovereignty and equitable value distribution. [0003] 2. Existing Web3 solutions address narrow use cases without an inclusive, closed-loop economy spanning all human needs and resources. [0004] 3. Prior ReadName domain reservations lacked real-time resolution, token mapping, and governance.

SUMMARY OF THE INVENTION

[0005] The BEIx24HWS ecosystem: [0006] Registers 1,600 top-level ReadName domains across 999 needs and 365 industries for 8.2 billion users. [0007] Uses a BEI behavior-energy chip to capture actions, mapped via a tensor E_{fb} formula, issuing tradable tokens $R(t)=(1+\lambda \cdot \text{Math.E}_{fb})^{\kappa}$. [0008] Employs hybrid DAO+centralized governance, multi-factor security, and smart-contract enforcement. [0009] Integrates ATMS.com/168Bank.com for instant DeFi and BxAI for parameter optimization. [0010] Implements Green Organic Mine NFT mining for sustainable certification and token amplification.

DETAILED DESCRIPTION OF THE INVENTION

[0011] 1. ReadName fractal domain module for dynamic ecosystem expansion. [0012] 2. BEI chip data acquisition with edge gateways. [0013] 3. Tensor mapping and energy-to-token algorithm. [0014] 4. Smart-contract DAO governance. [0015] 5. Real-time finance (ATMS.com/168Bank.com) and cross-chain atomic swaps. [0016] 6. AI-blockchain optimizer (BxAI). [0017] 7. Privacy/security: time-rollback, kill-switch, zk-SNARK audit resistance. [0018] 8. Dynamic fractal expansion $N_{total}=N_{base} \times k^d$. [0019] 9. International integration with 100+ organizations, GDPR/KYC compliance.

Description

BRIEF DESCRIPTION OF THE DRAWINGS

- [0020] FIG. 1: System Architecture
- [0021] FIG. 2: Energy Mapping Flow
- [0022] FIG. 3: Fractal Expansion Model
- [0023] FIG. 4: Governance Layer Diagram

COMPARATIVE ANALYSIS

TABLE-US-00001	BEI × 24HWS	United States	China	European Union	Metric	Ecosystem (2024)
(2024)	(2024)	Annual Token	303,000 billion	26,700 billion	18,000 billion	18,600 billion
Output (USD)	USD	USD	USD	USD	Per Capita	37,000 80,000 12,700 42,000
Output (USD)	Money	Supply	90,000 billion	21,500 billion	43,000 billion	14,000 billion
(M2)	USD.sup.1	USD.sup.2	USD.sup.3	USD.sup.4	Jobs Created	6,060 160 780 200 (millions)

Data Sources and Calculation Basis

[0024] 1. BEIx24HWS metrics based on Implementation Example 21 and Calculation Methodology, 8.2 billion users. [0025] 2. U.S. GDP & Per Capita: IMF WEO April 2025. [0026] 3. China GDP, M2: World Bank 2024; PBOC December 2024. [0027] 4. EU GDP, M3: Eurostat 2024; ECB December 2024. [0028] .sup.1Money Supply M2: aggregated globally for BEIx24HWS study. [0029] .sup.2U.S. Federal Reserve; .sup.3People's Bank of China; .sup.4European Central Bank.

Deployment & Support Materials

[0030] To facilitate global adoption and meeting diverse national and regulatory requirements, the following support documents will be provided: [0031] 1. Localized Whitepapers: Customized policy and strategy recommendations tailored to each country's regulatory and economic priorities. [0032] 2. Compliance Technical Reports: Detailed mappings to central bank frameworks, financial regulations, data privacy laws, and cybersecurity standards in each jurisdiction. [0033] 3.

Demonstration Zone Implementation Plans: Quantitative targets, KPIs, and pilot rollout roadmaps for special economic zones or innovation districts. [0034] 4. Multilingual UX Integration: Localized ReadName registration portals and BEI chip management interfaces, supporting regional languages and cultural contexts.

Implementation Example 32: Defensive and Collaborative AI Strategies

[0035] To anticipate and mitigate challenges by external AI entities and maintain system integrity, the following strategies are integrated into the patent framework:

1. Code-Level Review and Pseudocode Appendix

[0036] Provide detailed pseudocode of core algorithms (E_fb computation, tensor mapping, token issuance) in an annex, enabling transparent third-party auditing without exposing proprietary implementation.

2. Performance Benchmarking Protocols

[0037] Establish standard test suites comparing BEIx24HWS modules against existing DeFi protocols, DAO frameworks, and AI optimization engines; publish results as living documents.

3. Formal Security Audit Framework

[0038] Integrate formal verification toolchains (e.g., TLA+, Coq) for smart-contract modules (zk-SNARK reconciliation, kill-switch, rollback); require certificates of audit for major releases.

4. Iterative Parameter Optimization and Governance

[0039] Implement on-chain governance proposals enabling real-time adjustment of λ , κ , γ , and tensor decomposition parameters, ensuring continuous resilience and performance tuning.

5. Cross-Model Collaboration and Federated Learning Interface

[0040] Define secure APIs and federated learning protocols allowing external AI models to contribute to global optimizer without accessing raw user data; include differential privacy safeguards.

6. AI Council Oversight and Rapid Response Team

Charter an AI Council via DrAIGlobal.com DAO to monitor external AI developments, propose patches, and coordinate rapid upgrade deployments across nodes.

[0041] These strategies ensure that the BEIx24H WS ecosystem remains secure, performant, and collaborative in the face of evolving external AI comparisons and adversarial analyses.

Claims

1. System claim: An integrated global ecosystem system based on BEIx24HWS, comprising: a. a fractal ReadName domain management module registering and resolving top-level and recursive subdomains; b. a BEI behavior-energy chip data acquisition module capturing active and passive user actions; c. a high-dimensional energy mapping and token issuance module implementing energy-to-token mapping; d. a hybrid governance module combining decentralized DAO voting and centralized strategy committees; e. an integrated real-time finance module

(ATMS.com/168Bank.com); f. an AI-blockchain optimization module (BxAI); and g. a “Green Organic Mine” sustainable certification token mining mechanism.

2. Method claim: A method of operating the system of claim 1, comprising: a. capturing user behavior data via the BEI chip; b. mapping behavior-energy into multi-dimensional tensors; c. issuing tokens according to the formula $R(t) = (1 + \lambda \times E_{fb}) \{ \text{circumflex over ()} \} \kappa$; d. executing DAO governance decisions; e. performing real-time financial transactions; and f. optimizing system parameters via AI-blockchain federated learning.

3. Computer-Readable Medium claim: A non-transitory computer-readable medium storing instructions that, when executed by a processor, perform the method of claim 2.

4. The system of claim 1, wherein the energy mapping module dynamically adjusts issuance parameters via federated learning and smart contract feedback loops.

5. The system of claim 1, further comprising a privacy and security framework including: a.

blockchain-based time rollback snapshots; b. privacy kill-switch data destruction; and c. zk-SNARK audit-resistant verification with multi-factor reconciliation.

6. The system of claim 1, wherein fractal expansion of ReadName subdomains follows $N_{total} = N_{base} \times k^{\lfloor \log_2(N_{total}) \rfloor}$ with adaptive tuning.

7. The system of claim 1, wherein multi-scale simulation employs agent-based modeling and Monte Carlo sampling for parameter calibration.

8. The system of claim 1, wherein cross-chain compliance is achieved via IBC/Cosmos and decentralized Oracles for KYC/AML and GDPR.

9. The system of claim 1, wherein hybrid governance requires >50% DAO member approval and $\frac{3}{5}$ institutional committee approval for global policy enactment.

10. The system of claim 1, wherein each user is allocated one free BEI terminal, ten land reserves, eight thousand vaults, and 1,095 virgin lands.

11. The system of claim 1, wherein the BEI chip replaces SIM card functionality to enable encrypted global communication without telecommunication carriers.

12. The system of claim 1, wherein financial transactions settle in less than one second with fees below 0.1% using cross-chain atomic swaps and multi-signature validations.

13. The system of claim 1, wherein 365 industry-specific shard networks support parallel deployment of user nodes across finance, healthcare, education, retail, manufacturing, and other sectors.

14. The system of claim 1, further comprising an individual sovereignty command center for each user, providing real-time monitoring of ecosystem status, token balances, and governance participation.

15. The system of claim 1, wherein a tiered promotion mechanism advances users through personal, family, community, regional, and global governance roles based on performance metrics.

16. The system of claim 1, wherein initial resource allocations and terminals expand fractally based on user demand and ecosystem health metrics through smart contract enforcement.

17. The system of claim 1, wherein over 100 international organizations integrate via ReadName subdomains and standardized taxonomy for cross-organization governance collaboration.

18. The system of claim 1, wherein DrAIGlobal.com federated AI governance platform schedules AI services and updates via DAO-elected AI Councils.

19. The system of claim 1, wherein culture strategies from 36G.com inject localized historical and spiritual context into AI decision-making models.

20. The system of claim 1, wherein the multi-dimensional interaction tensor $T[user][ecosystem][demand][industry][resource]$ is decomposed using CP or Tucker methods for real-time data analytics.
